

Database Management

BU.330.770

Session 2 (part II)

Instructor: Changmi Jung, Ph.D.

Table Creation & Management

Session Objectives

- » Identify the table name and structure
- » Create a new table using the CREATE TABLE command
- » Use a subquery to create a new table
- » Add a column to an existing table
- » Modify the definition of a column in an existing table
- » Delete a column from an existing table
- » Rename, Truncate, and Drop a table

Database Table

- » A database object
- » Stores data for the database
- » Consists of columns and rows
- » Created and modified through data definition language
(DDL) commands

DDL → Data Control language
↳ user access

Wait, what is

DDL (Data Definition Language)?

DML (Data Manipulation Language)?

works with structure of table

works with data inside table.

DDL → just querying of data

Table Design

» Table and column names:

- Can contain a maximum of 30 characters – no blank spaces
- Must begin with a letter
- Can contain numbers, underscore (_), and number sign (#)
- Must be unique
- No reserved words are allowed: keywords, data types (ex. SELECT, DISTINCT, CHAR, etc.)

Data Types

Data type	Description
VARCHAR2(n)	Variable-length character data, and the n represents the column's maximum length. The maximum size is 4000 characters. There's no default size for this datatype; a maximum value must be specified. Ex. VARCHAR2(9) can contain up to nine letters, numbers, or symbols.
CHAR(n)	Fixed-length character column, and the n represents the column's length. The default size is 1, and the maximum size is 2000. Ex. CHAR(9) can contain nine letters, numbers, or symbols. However, if fewer than nine are entered, spaces are added to the right to force the data to reach a length of nine.
NUMBER(p, s)	Numeric column. The p indicates precision , the total number of digits to the left and right of the decimal position, to a maximum of 38 digits. The s , or scale , indicates the number of positions to the right of the decimal. Ex. NUMBER(7, 2) can store a numeric value up to 99999.99. If precision or scale isn't specified, the column defaults to a precision of 38 digits.
DATE	Stores date and time between January 1, 4712 BC and December 31, 9999 AD. Seven bytes are allocated to the column to store the century, year, month, day, hour, minute, and second of a date. Oracle displays the date in the format DD-MON-YY. Other aspects of a date can be displayed by using the TO_CHAR format.

Table Creation Syntax & Defining Columns

```
CREATE TABLE tablename  
  (columnname datatype [DEFAULT value]  
  [, columnname datatype [DEFAULT value] ] );
```

- » Column definition list must be enclosed in parentheses
- » Datatype must be specified for each column
- » Maximum of 1,000 columns
- » Default value is the one the system stores automatically if a user makes no entry in the column. (ex. current date)

CREATE TABLE Command Example

```
Worksheet | Query Builder
1 CREATE TABLE acctmanager
2 (amid CHAR(4),
3  amfirst VARCHAR(12),
4  amlast VARCHAR(12),
5  amedate DATE DEFAULT SYSDATE,
6  amsal NUMBER(8,2),
7  amcomm NUMBER(7,2) DEFAULT 0,
8  amearn AS (amsal + amcomm), ← Virtual Column
9  region CHAR(2)
10 );
11
```

Script Output x

Task completed in 0.04 seconds

Table ACCTMANAGER created.

Viewing List of Tables: USER_TABLES

- » A data dictionary is a typical component of a DBMS that maintains information about database objects
- » You can query the data dictionary to verify all the tables that exist in your schema (used in Part I exercise with SELECT)
- » The USER_TABLES data dictionary object maintains information regarding all your tables

```
SELECT table_name  
FROM user_tables;
```

Viewing Table Structures: DESCRIBE

» **DESCRIBE** (or **DESC**) displays the structure of a specified table

The screenshot shows a database query tool interface. At the top, there are tabs for 'Worksheet' and 'Query Builder'. The 'Query Builder' tab is active, and the query 'DESC acctmanager;' is entered in the text area. Below the query area, there is a 'Script Output' window. The output window shows the results of the query, which is a table with three columns: 'Name', 'Null?', and 'Type'. The table lists the columns of the 'acctmanager' table: AMID, AMFIRST, AMLAST, AMEDATE, AMSAL, AMCOMM, AMEARN, and REGION. The 'Null?' column for all columns is empty, indicating they are not nullable. The 'Type' column shows the data type for each column: CHAR(4) for AMID, VARCHAR2(12) for AMFIRST and AMLAST, DATE for AMEDATE, NUMBER(8,2) for AMSAL, NUMBER(7,2) for AMCOMM, NUMBER for AMEARN, and CHAR(2) for REGION. A yellow circle highlights the question mark in the 'Null?' column for the AMID row.

Name	Null?	Type
AMID	?	CHAR (4)
AMFIRST		VARCHAR2 (12)
AMLAST		VARCHAR2 (12)
AMEDATE		DATE
AMSAL		NUMBER (8, 2)
AMCOMM		NUMBER (7, 2)
AMEARN		NUMBER
REGION		CHAR (2)

Using USER_TAB_COLUMNS

» Another useful data dictionary object displaying column information

» We can verify the default settings of the columns

Worksheet Query Builder

```
SELECT column_name, data_type, data_default  
FROM user_tab_columns  
WHERE table_name = 'ACCTMANAGER';
```

Why use uppercase?

Script Output x Query Result x

SQL | All Rows Fetched: 8 in 0.244 seconds

	COLUMN_NAME	DATA_TYPE	DATA_DEFAULT
1	AMID	CHAR	(null)
2	AMFIRST	VARCHAR2	(null)
3	AMLAST	VARCHAR2	(null)
4	AMEDATE	DATE	SYSDATE
5	AMSAL	NUMBER	(null)
6	AMCOMM	NUMBER	0
7	AMEARN	NUMBER	"AMSAL"+"AMCOMM"
8	REGION	CHAR	(null)

Invisible Columns

- » We can create hidden columns by giving 'invisible' option
- » Run SELECT or DESC command to check if col2 is displayed

The screenshot shows the SQL Developer interface with the 'Query Builder' tab selected. The SQL editor contains the following code:

```
CREATE TABLE test_invis  
(col1 CHAR(1),  
 col2 NUMBER(4) invisible);
```

The word 'invisible' is underlined in red. Below the editor, the 'Script Output' window shows the message: 'Task completed in 0.07 seconds'.

Table TEST_INVIS created.

The screenshot shows the SQL Developer interface with the 'Query Builder' tab selected. The SQL editor contains the following code:

```
DESC test_invis;
```

Below the editor, the 'Script Output' window shows the message: 'Task completed in 0.114 seconds'. Below this, the output of the DESC command is displayed in a table format:

Name	Null?	Type
COL1		CHAR(1)

Check Invisible Columns

» Query the USER_TAB_COLS data dictionary

Worksheet		Query Builder	
		<pre>SELECT column_name, hidden_column FROM user_tab_cols WHERE table_name = 'TEST_INVIS';</pre>	
		Script Output x Query Result x	
		SQL All Rows Fetched: 2 in 0.014 seconds	
		COLUMN_NAME	HIDDEN_COLUMN
1	COL1		NO
2	COL2		YES

USER_TAB_COLUMNS does not have the same column showing whether it's hidden or not

Table Creation through Subqueries

- » You can use subqueries to retrieve data from an existing table
- » Subquery (or nested query) is a SELECT statement used in another SQL command (more details in Chapter 12 of the textbook)
- » Requires use of **AS** keyword
- » New column names can be assigned

```
CREATE TABLE tablename [(columnname1, columnname2, ...)]  
AS (subquery);
```

Subqueries must be enclosed in parentheses so that
Oracle can distinguish it from the rest of the command!

CREATE TABLE...AS Command Example

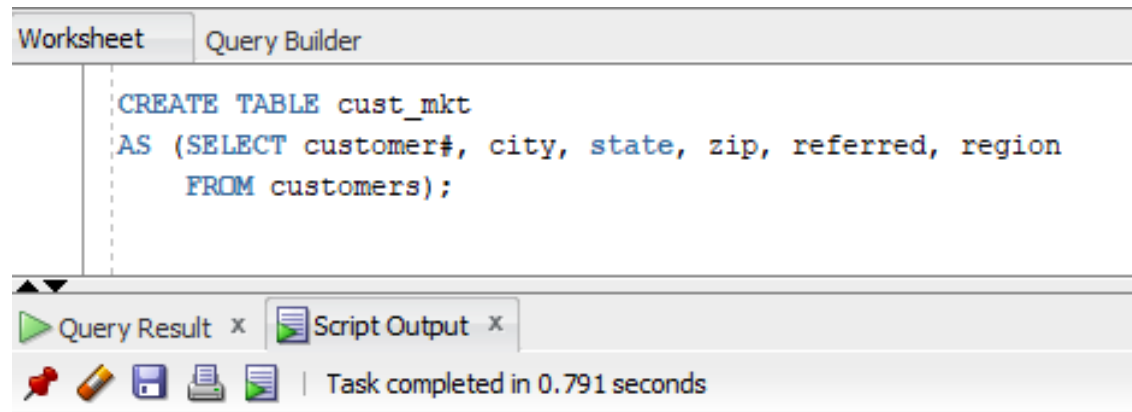

Table CUST_MKT created.

Modifying Existing Tables

- » Accomplished through the ALTER TABLE command
- » Use an **ADD** clause to add a column
- » Use a **MODIFY** clause to change a column
- » Use a **DROP COLUMN** to drop a column

```
ALTER TABLE tablename  
ADD|MODIFY|DROP COLUMN columnname [definition];
```

Example: ALTER TABLE...ADD Command

```
ALTER TABLE tablename  
ADD (columnname datatype [DEFAULT] ...);
```

The screenshot shows the SQL Developer interface. The 'Query Builder' tab is active, displaying the following SQL command:

```
ALTER TABLE publisher  
ADD (ext NUMBER(4));  
  
DESC publisher;
```

Below the query editor, the 'Script Output' window shows the execution results:

Task completed in 4.57 seconds

Table PUBLISHER altered.

Name	Null?	Type
PUBID	NOT NULL	NUMBER(2)
NAME		VARCHAR2(23)
CONTACT		VARCHAR2(15)
PHONE		VARCHAR2(12)
EXT		NUMBER(4)

A blue arrow points from the 'EXT' column in the table output to the explanatory text below.

When added, it will be the last column in the table

ALTER TABLE...DROP COLUMN Command

```
ALTER TABLE tablename  
DROP COLUMN columnname;
```

- » Can only reference **one column per execution**
- » Deletion is permanent
- » Cannot delete the last remaining column in a table
- » Cannot delete a primary key column from a table

Table PUBLISHER altered.

Dropping Column from Table

Table PUBLISHER altered.

You can't remove the 'pubid' column because...?

Error starting at line : 213 in command -

```
ALTER TABLE publisher
```

```
DROP COLUMN pubid
```

Error report -

ORA-12992: cannot drop parent key column

12992. 00000 - "cannot drop parent key column"

*Cause: An attempt was made to drop a parent key column.

*Action: Drop all constraints referencing the parent key column, or specify CASCADE CONSTRAINTS in statement.

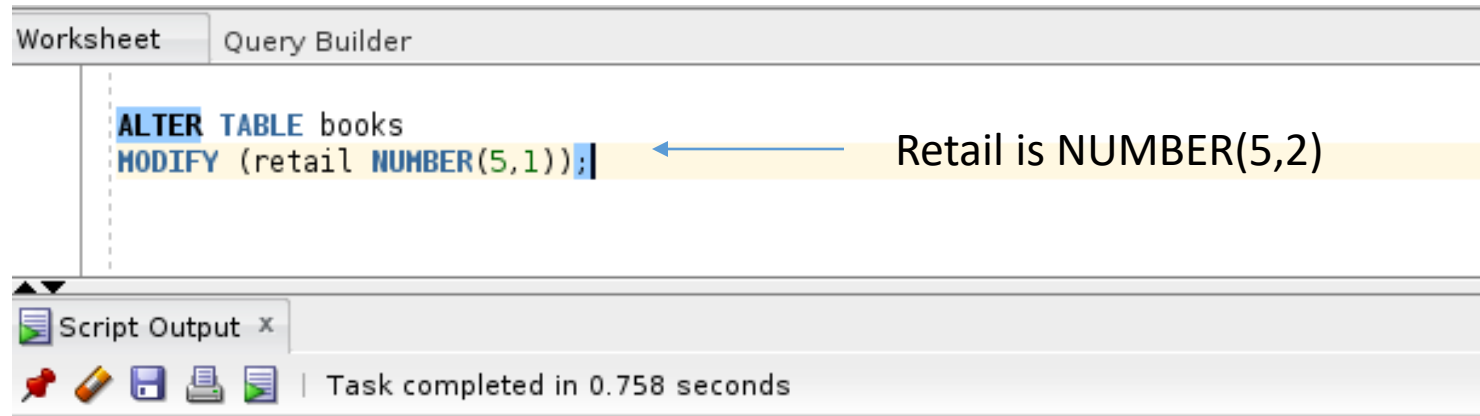

ALTER TABLE... MODIFY

Modification Guidelines

- » You can modify: column size, datatype, default value, visibility
- » Column must be as wide as the data it already contains
- » If a NUMBER column already contains data, size **cannot be decreased**
- » Adding or changing default data does not affect existing data

```
ALTER TABLE tablename  
MODIFY (columnname datatype [DEFAULT] ...);
```

You Will Get Errors....

Error starting at line : 97 in command -
ALTER TABLE books
MODIFY (retail NUMBER(5,1))
Error report -
ORA-01440: column to be modified must be empty to decrease precision or scale
01440. 00000 - "column to be modified must be empty to decrease precision or scale"
*Cause:
*Action:

Then, can you modify it to NUMBER(5, 3)???

DEFAULT Doesn't Change Existing Values (1/2)

Worksheet Query Builder

```
ALTER TABLE publisher  
ADD rating CHAR(1);
```

First, let's add a new column, 'Rating' to the Publisher table.

Script Output x Query Result x

Task completed in Worksheet Query Builder

Table PUBLISHER altered.

```
SELECT *  
FROM publisher
```

Script Output x Query Result x

SQL | All Rows Fetched: 5 in 0.098 seconds

	PUBID	NAME	CONTACT	PHONE	EXT	RATING
1	1	PRINTING IS US	TOMMIE SEYMOUR	000-714-8321	(null)	(null)
2	2	PUBLISH OUR WAY	JANE TOMLIN	010-410-0010	(null)	(null)
3	3	AMERICAN PUBLISHING	DAVID DAVIDSON	800-555-1211	(null)	(null)
4	4	READING MATERIALS INC.	RENEE SMITH	800-555-9743	(null)	(null)
5	5	REED-N-RITE	SEBASTIAN JONES	800-555-8284	(null)	(null)

There are no values in the 'Rating' column now.

DEFAULT Doesn't Change Existing Values (2/2)

```
Worksheet  Query Builder
ALTER TABLE publisher
MODIFY rating DEFAULT 'N';
```

Then, let's assign the 'Rating' column a default value

Script Output x Query Result x

Task completed in 0.018 seconds

Table PUBLISHER altered.

```
Worksheet  Query Builder
SELECT *
FROM publisher;
```

Script Output x Query Result x

SQL | All Rows Fetched: 5 in 0.018 seconds

	PUBID	NAME	CONTACT	PHONE	EXT	RATING
1	1	PRINTING IS US	TOMMIE SEYMOUR	000-714-8321	(null)	(null)
2	2	PUBLISH OUR WAY	JANE TOMLIN	010-410-0010	(null)	(null)
3	3	AMERICAN PUBLISHING	DAVID DAVIDSON	800-555-1211	(null)	(null)
4	4	READING MATERIALS INC.	RENEE SMITH	800-555-9743	(null)	(null)
5	5	REED-N-RITE	SEBASTIAN JONES	800-555-8284	(null)	(null)

Values in 'Rating' did not change

Modify Columns to become (in)visible

Worksheet Query Builder

```
DESC test_invis;  
  
ALTER TABLE test_invis  
MODIFY col2 visible;  
  
SELECT column_name, data_type, hidden_column  
FROM user_tab_cols  
WHERE table_name = 'TEST_INVIS';
```

Script Output x Query Result x

SQL | All Rows Fetched: 2 in 0.017 seconds

	COLUMN_NAME	DATA_TYPE	HIDDEN_COLUMN
1	COL1	CHAR	NO
2	COL2	NUMBER	NO

Use 'visible' to
make the invisible
column visible.

Use 'invisible' to
make the visible
column invisible.

Renaming a Table

- **RENAME...TO** is used to rename a table – the old name is no longer valid

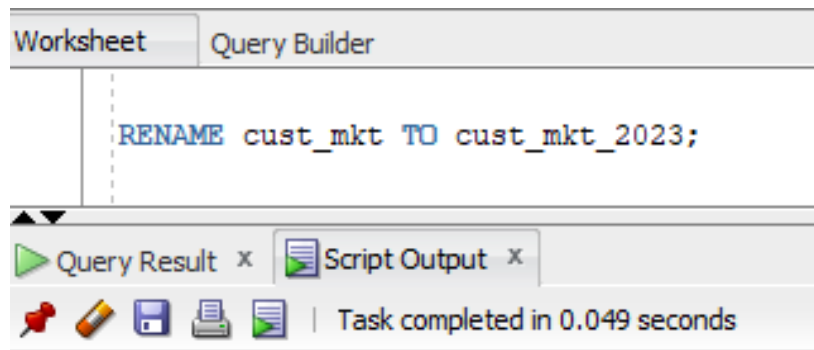

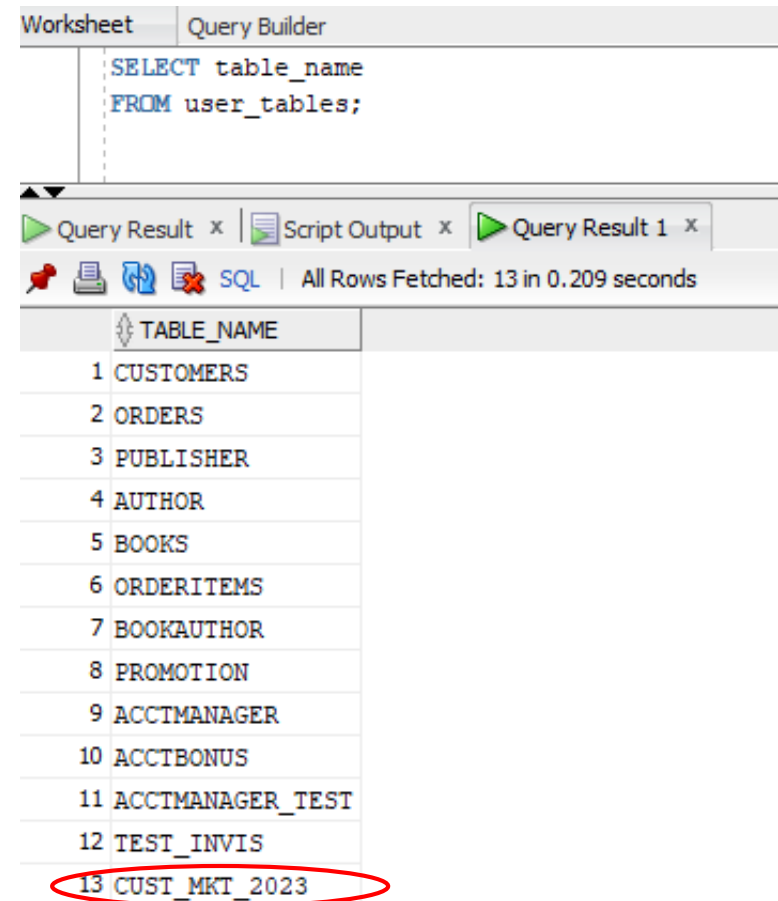

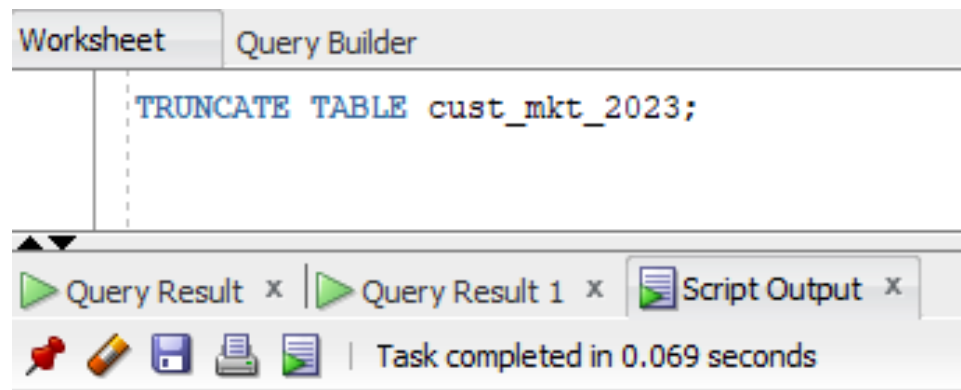

Table renamed.

Truncating a Table

- » **TRUNCATE TABLE** command – all rows are deleted
- » Structure of the table remains

- » What's the difference between 'Truncate Table' and 'Delete From' which deletes all rows in a table (`DELETE FROM cust_mkt_2023;`)?

Deleting a Table

- **DROP TABLE** command – table structure and contents are deleted

```
DROP TABLE tablename [PURGE];
```

What if you dropped the wrong table?

DROP TABLE without Purge Option

» Dropped tables can be recovered from the recycle bin:
both table structure and data

Just

Worksheet		Query Builder	
		<pre>SELECT object_name, original_name FROM recyclebin;</pre>	
		Script Output x Query Result x	
		SQL All Rows Fetched: 25 in 0.047 seconds	
	OBJECT_NAME	ORIGINAL_NAME	
23	BIN\$81gFxtJ5sV7gUz0RAAovgA==\$0	TEST_INVIS	
24	BIN\$81gFxtJ6sV7gUz0RAAovgA==\$0	TEST_INVIS	
25	BIN\$81gFxtJ7sV7gUz0RAAovgA==\$0	CUST_MKT_2023	

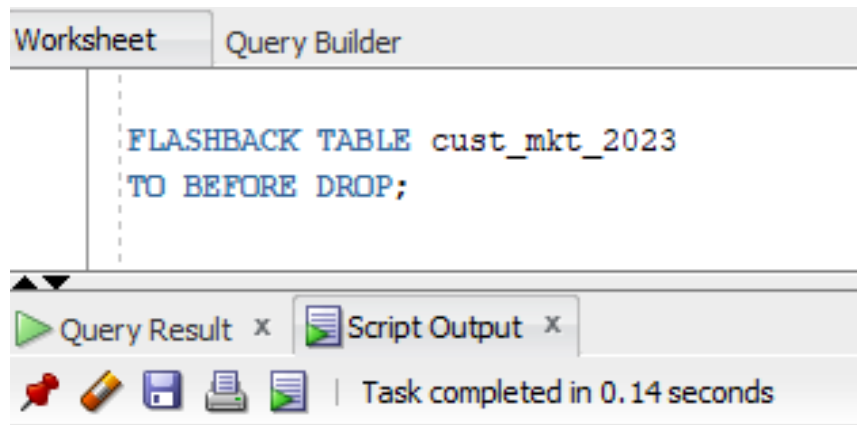

I didn't use
Purge, Yay!

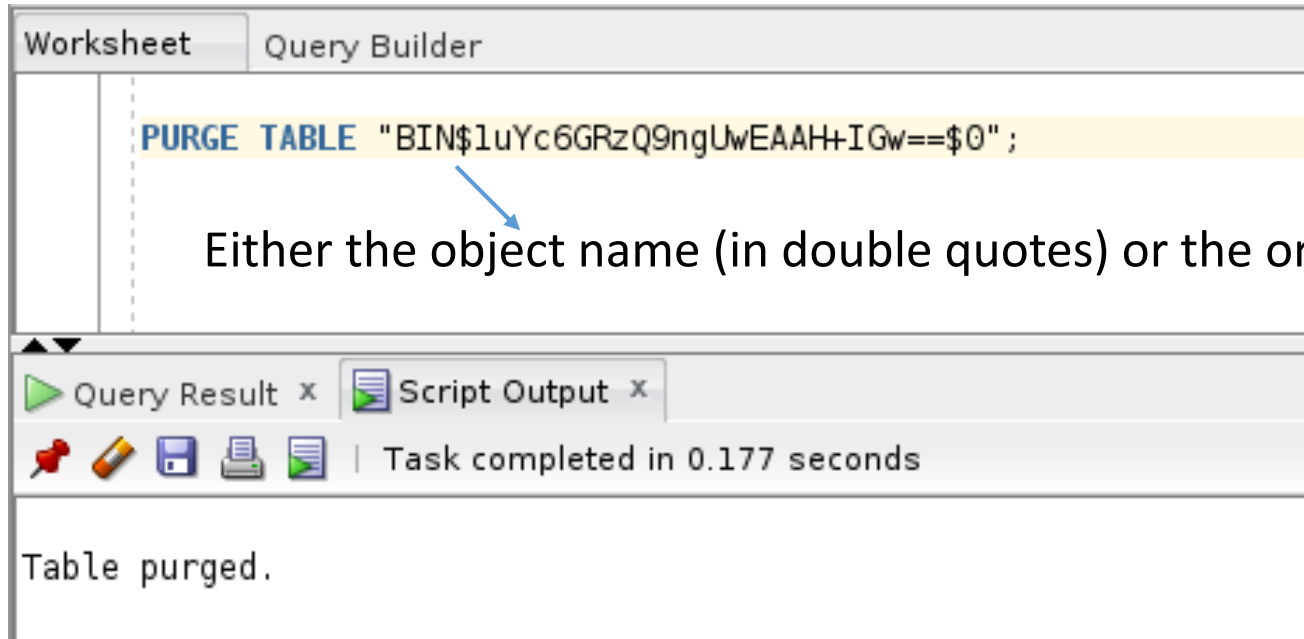

FLASHBACK Command

» **FLASHBACK TABLE...TO BEFORE DROP** command recovers a table from the recycle bin

Flashback succeeded.

Use PURGE to Remove a Table from the Recycle Bin

- **PURGE TABLE** command permanently removes the table from the recycle bin.
- **PURGE RECYCLEBIN** removes all tables in the recycle bin.

PURGE Option for DROP TABLE Command

- » Using the **PURGE** option will **permanently remove** a table from the database

```
DROP TABLE tablename PURGE;
```

- » The table will not be copied into the recycle bin

Table CUST_MKT_2023 dropped.

Summary (1/2)

- » You create a table with the CREATE TABLE command
- » Each column to be contained in the table must be defined in terms of the column name, data type, and for certain data types, the width
- » Each column name within a table must be unique
- » You can change the structure of a table with the ALTER TABLE command
- » Columns can be added, resized, and even deleted with the ALTER TABLE command
- » Tables can be renamed with the RENAME...TO command

Summary (2/2)

- » To delete all the rows in a table, use the TRUNCATE TABLE command
- » To remove both the structure of a table and all its contents, use the DROP TABLE command
- » A dropped table is moved to the recycle bin and can be recovered using the FLASHBACK TABLE command
- » Use Purge Table *object_name* to permanently remove the table from the recycle bin
- » Using the PURGE option in a DROP TABLE command permanently removes the table, meaning you cannot recover it from the recycle bin

Let's Check Our Knowledge!

The Kahoot! logo is centered on a dark purple rectangular background. The word "Kahoot!" is written in a bold, white, sans-serif font. A lighter purple arrow points from the right towards the text.

Kahoot!
